

Independent & Group Research-Based Learning (Multidisciplinary, Integrated Project)

Grade 2 - Summer Project – AY 2026-27

Purpose of the Project

At Bright Riders School, Dubai, we believe that meaningful learning extends beyond the classroom. The Independent and Group Research-Based Learning Project for this summer is designed to encourage students to explore real-world issues, develop curiosity, think creatively, and apply their knowledge across subjects.

This project aims to nurture essential 21st-century skills such as critical thinking, collaboration, communication, creativity, research, problem-solving, and responsible use of technology. Through both independent inquiry and collaborative learning, students will learn to connect academic concepts with authentic experiences and develop a deeper understanding of their role as responsible global citizens.

Nature of the Project

The Summer Project consists of two components:

Part 1 – Independent Project (5 Marks)

Students will complete an individual task assigned for various subjects. This component promotes self-directed learning, responsibility, and independent thinking.

Part 2 – Group Research Project (5 Marks)

Students will work collaboratively in groups to investigate a theme, propose solutions, create a product, and present evidence of their learning. [A Vision Paper](#) for the group project must be submitted along with the individual project.

NOTE: The Summer Project forms a part of the Subject Enrichment Assessment (SEA) for Term 1 and will be considered for internal assessment.

4. Subject Structure and Timeline

Cluster A	Cluster B	Cluster C
English – Independent Project	Mathematics, Science, SST, Hindi & French	Arabic, Islamic Studies and MSCS

Project	Submission
Part 1 – Independent Project + Vision Paper	31 August – 4 September
Part 2 – Group Research Project	12 October

Assessment Criteria

Sl.no	Criteria	Marks
1	Originality of the project	1
2	Creativity of Ideas	2
3	Innovation Quotient	0.5
4	Accurate application of learning	0.5
5	Relevance & quality of research	2
6	Effectiveness of problem solving	2
7	Real-life connection	0.5
8	Presentation & organisation	0.5
9	Timely submission & adherence to guidelines	0.5
10	Completion of All Required Components	0.5

Subject-wise Project Activities

Cluster A

My Summer Photo Diary

Project Overview

This summer, you will become a memory collector! Create a **Digital Photo Diary** using **Book Creator** to share your summer adventures.

You will make different pages about special moments from your holiday and add pictures, sentences, and voice recordings to bring your memories to life.

Project Guidelines

Use **Book Creator** to create your Digital Photo Diary.

Create a page for each of the following:

A Day at the Beach

A Family Visit

A Park Adventure

Learning Something New

For each page, include:

- One picture
- One simple sentence
- One voice recording

Project Requirements

Your Photo Diary should include:

- Four pages (one for each topic)
- One picture on each page
- One sentence on each page
- One voice recording on each page
- Your name and class on the cover page

Success Criteria

- Add pictures to my digital diary.
- Write simple sentences about my experiences.
- Record my voice clearly.
- Share my summer memories confidently.
- Create neat and creative pages.
- Use Book Creator with support.

Cluster B

"Save Energy, Save Our Future!" – Energy Detective Challenge

Objective:

To explore how the Sun is a source of energy by designing and building a simple solar oven. Students will investigate how sunlight can be used to heat food without electricity and understand how using solar energy helps save electricity and protect the environment.

Problem Statement

During the summer, the Sun provides plenty of natural heat and light. Most families use electricity every day to cook or warm food, which increases energy consumption. Scientists and engineers have discovered that the Sun's energy can be used to cook simple foods without using electricity. Families are looking for environmentally friendly ways to reduce electricity use while making use of renewable energy. Your challenge is to become a Solar Energy Engineer and design a working solar oven that uses the Sun's heat to warm or melt food using only solar energy.

Task

- Find out what solar energy is and why it is an important renewable source of energy.
- Investigate how a solar oven works.
- Design and build a simple solar oven using recycled or household materials.
- Predict which materials will help keep the oven warm.
- Test your solar oven by placing it in direct sunlight.
- Observe and record what happens to a simple food item (such as chocolate, marshmallows, cheese, or butter).

- Measure and record the time taken for the food to melt or warm.
- Identify ways to improve your solar oven to make it work better.
- Explain how using solar energy can help save electricity and protect the environment.
- **Sauvons l'eau , comment j'économise l'eau ,Create a poster, model, booklet,Mon Petit dictionnaire d'image.**
- ऊर्जा बचाने के 4 उपाय लिखकर एक पोस्टर बनाइए ।

Guiding Questions

- What is solar energy?
- Why is the Sun an important source of energy?
- How does a solar oven work?
- Which materials help keep heat inside the oven?
- Which food item melted or warmed the fastest?
- How long did it take for the food to melt?
- How can you improve your solar oven?
- Why is solar energy better for the environment?
- How does using solar energy help save electricity?
- What can children do to use energy wisely?

Mathematics Activity (Choose Any one)

- Measure the time taken for food to melt or warm (minutes).
- Record the temperature inside and outside the solar oven (if a thermometer is available).
- Measure and record the starting and end temperatures (if a thermometer is available) and compare which food item heated the most.
- Compare the melting times of different food items. Create a table to record observations.
- Find the difference in time taken for two food items to melt or compare the temperature before and after heating.

Suggested Final Product

Students may create a:

- **3D Working Solar Oven Model**
- **Solar Energy Investigation Poster**
- **Solar Oven with interactive thermometer**
- **Solar Oven Science Journal**
- **Storyboard: "Cooking with the Sun"**
- **Digital Presentation with Photos and Observations**
- **Video Demonstration of the Solar Oven Experiment**

Cluster C

UAE Vision, Innovation, and Cultural Preservation

Objective : To develop pride in the UAE by exploring Emirati culture, heritage, Arabic

language, Islamic values, family traditions, wellbeing, and national identity through creative and meaningful activities.

Activity

My UAE Handprintt

The student will print their handprint on an A4 sheet. Inside the handprint, they will write:

- A word or a short sentence in Arabic about the UAE.
- A word or a short sentence in English about the UAE.
- A word that represents a positive value.

Students will then create a class display by arranging their handprints as the leaves of a tree, with each handprint showing their words and messages.

Alternatively, students may draw a falcon and use their handprints as the falcon's wings. Inside each handprint, they will write their Arabic and English sentences about the UAE, along with a positive value, to celebrate Emirati culture, national identity, and values.

Design and create meaningful artifacts that reflect the rich Arabic and Islamic values of the UAE. Explore the nation's heritage, culture, and traditions while fostering creativity, collaboration, and a deep respect for Emirati values and identity.

Arabic:

- أحب الإمارات
- الإمارات وطني
- أفخر بالإمارات

English:

- I love UAE.
- UAE is my home.
- I am proud of the UAE.

Values:

- Respect
- Kindness
- Tolerance
- Responsibility
- Cooperation
